

Setting up Filezilla for Digidown Terminal

This document details how to setup Filezilla as an FTP server for use with the Digidown Terminal.

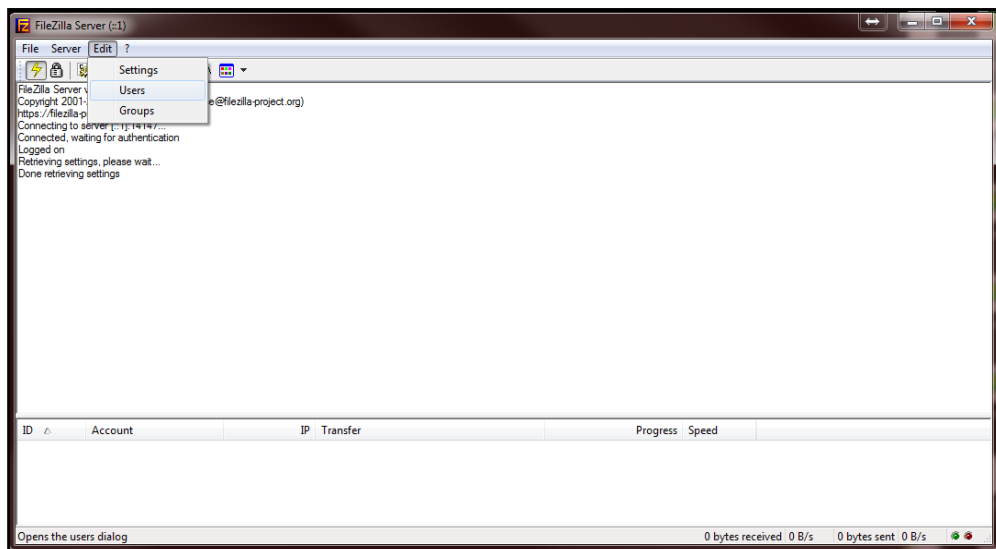

- Step 1: Download Filezilla installer from <https://filezilla-project.org/>
- Step 2: Install Filezilla on your local server- make sure you click 'advanced' install and de-select all the add ons. Leave Startup settings as default during install.

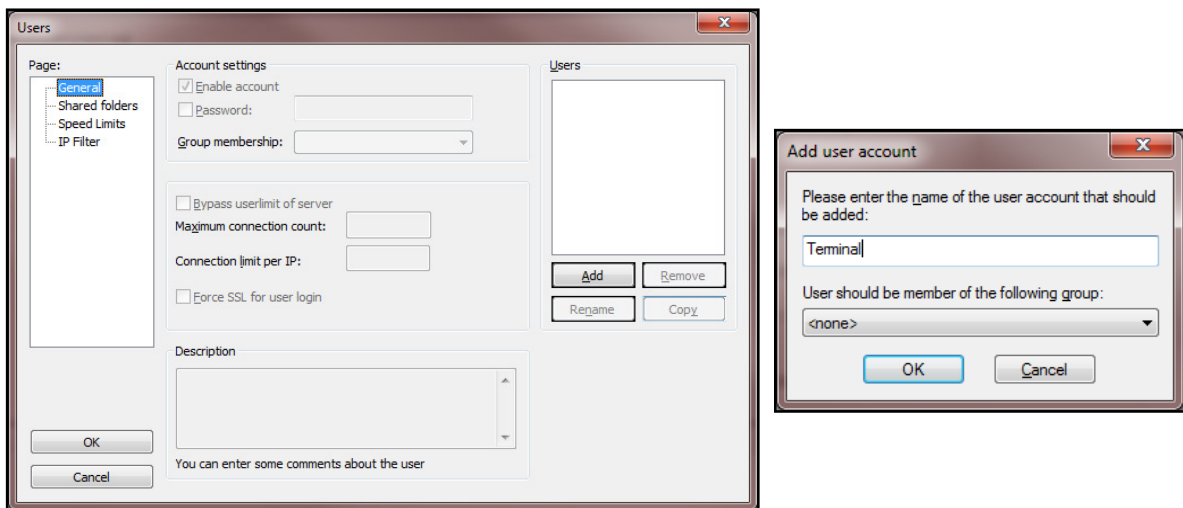

- Step 3: Click OK when prompted to connect to the server.

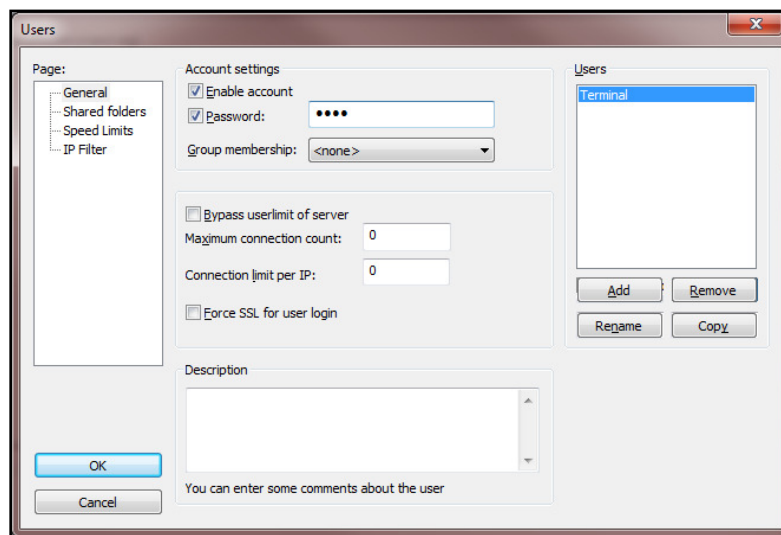

- Step 4: Access the Users Menu within the server.

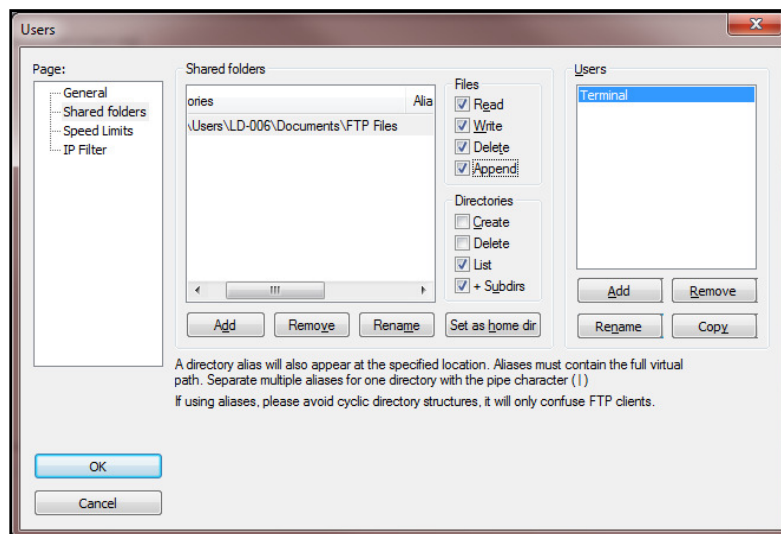

- Step 5: Create a new user by clicking the 'Add' button.

- Step 6: Enter a password for the user.

- Step 7: Under the Shared Folders menu, Click Add to select the server directory you want the files uploaded to go into. Ensure the write, delete and append boxes are checked.

- Step 8: Click OK to finish configuring the server and close the Server window.
