

Digidown[®] RDL

Background tachograph downloading system

Digidown RDL is a tachograph vehicle and driver card download system that runs in the background.

Benefits

Easy to install. It only takes 5 minutes to have it up and running.

Real time data available as standard. Access real time data such as driver identity, current driver activity, driving time notifications and more.

Made in the UK. The only remote download system made in the UK.

Superb support. We will ensure that your partnership with us is a success at every stage.

Don't miss a single day. Download all driver cards as soon as they are inserted in the tachograph or as often as you want.

Hyper Card range compatible. Handling different companies was never so easy. Host as many cards as you need without limitations.

Supporting Compliance. Delivering information. Providing certainty. All under your control.

Features

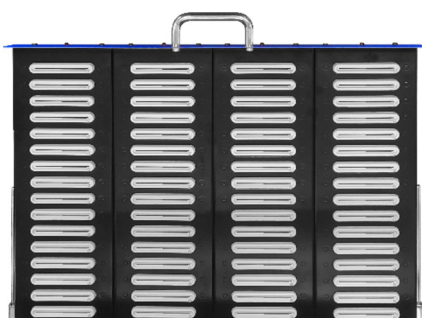

Schedule your downloads to suit business needs. Get your tachograph downloads daily, weekly or monthly.

Send the data wherever you need it to go. Receive your data automatically in your email inbox or send them straight to your analysis bureau.

Flexible. Download all or part of the data stored in the tachograph including activities, events, faults and detailed speed

Secure. Encrypted communications.

Universal. Works with all makes of digital tachographs.

**Compatible with
Hyper[™] Card range**
