

User Guide

DigidownRDL Button

1. Product Overview

The DigidownRDL Button has been designed as way to initiate the download of a driver card or VU file from within the vehicle. Typically, it might be used to download the driver card at the beginning and/or end of a shift. The button has a built-in LED to indicate the status of any ongoing request.

2. Installation Steps

1. If the DigidownRDL is already fitted to a vehicle, locate the unit inside the vehicle. Otherwise, skip to step 3.
2. Power off the DigidownRDL by unplugging the DigidownRDL Cable. Press the connector latch and pull to unplug).
3. Decide where the button is going to be located on the dashboard – typically near the DigidownRDL and Tachograph. Drill a hole of diameter 16 mm.
4. Separate the two parts of the cable at the white connector, then remove the nut from the button and feed the cable through the drilled hole.
5. Screw the nut back on to the button to secure it, and then reconnect the two parts of the cable.
6. Plug the DigidownRDL Button cable into the 8-way connector of the DigidownRDL
7. Reconnect the DigidownRDL Cable to power up the DigidownRDL again.

3. Actions

User Action	Task
Press and release button (approx. 1 second)	Download driver card in slot 1
